Ontology Engineering in a Networked World

Ontology Engineering in a Networked World

The Semantic Web is characterized by the existence of a very large number of distributed semantic resources, which together define a network of ontologies. These ontologies in turn are interlinked through a variety of different meta-relationships such as versioning, inclusion, and many more. This scenario is radically different from the relatively narrow contexts in which ontologies have been traditionally developed and applied, and thus calls for new methods and tools to effectively support the development of novel network-oriented semantic applications.

This book by Suárez-Figueroa et al. provides the necessary methodological and technological support for the development and use of ontology networks, which ontology developers need in this distributed environment. After an introduction, in its second part the authors describe the NeOn Methodology framework. The book's third part details the key activities relevant to the ontology engineering life cycle. For each activity, a general introduction, methodological guidelines, and practical examples are provided. The fourth part then presents a detailed overview of the NeOn Toolkit and its plug-ins. Lastly, case studies from the pharmaceutical and the fishery domain round out the work.

The book primarily addresses two main audiences: students (and their lecturers) who need a textbook for advanced undergraduate or graduate courses on ontology engineering, and practitioners who need to develop ontologies in particular or Semantic Web-based applications in general. Its educational value is maximized by its structured approach to explaining guidelines and combining them with case studies and numerous examples. The description of the open source NeOn Toolkit provides an additional asset, as it allows readers to easily evaluate and apply the ideas presented.

From reader reviews:

Pauline Jefferson:

What do you in relation to book? It is not important with you? Or just adding material if you want something to explain what your own problem? How about your free time? Or are you busy man or woman? If you don't have spare time to accomplish others business, it is gives you the sense of being bored faster. And you have extra time? What did you do? Everybody has many questions above. The doctor has to answer that question because just their can do which. It said that about publication. Book is familiar on every person. Yes, it is correct. Because start from on jardín de infancia until university need this specific Ontology Engineering in a Networked World to read.

Bobby Morrison:

Do you among people who can't read pleasant if the sentence chained within the straightway, hold on guys this specific aren't like that. This Ontology Engineering in a Networked World book is readable by simply you who hate the straight word style. You will find the data here are arrange for enjoyable reading experience without leaving possibly decrease the knowledge that want to deliver to you. The writer connected with Ontology Engineering in a Networked World content conveys objective easily to understand by many people. The printed and e-book are not different in the articles but it just different as it. So , do you even now thinking Ontology Engineering in a Networked World is not loveable to be your top record reading book?

Lawrence Shults:

Information is provisions for individuals to get better life, information these days can get by anyone in everywhere. The information can be a know-how or any news even restricted. What people must be consider when those information which is in the former life are hard to be find than now is taking seriously which one works to believe or which one typically the resource are convinced. If you get the unstable resource then you have it as your main information you will have huge disadvantage for you. All those possibilities will not happen within you if you take Ontology Engineering in a Networked World as the daily resource information.

Sylvia Alexander:

The reason why? Because this Ontology Engineering in a Networked World is an unordinary book that the inside of the guide waiting for you to snap the idea but latter it will jolt you with the secret it inside. Reading this book next to it was fantastic author who else write the book in such awesome way makes the content interior easier to understand, entertaining means but still convey the meaning totally. So , it is good for you for not hesitating having this any more or you going to regret it. This excellent book will give you a lot of rewards than the other book have got such as help improving your talent and your critical thinking approach. So , still want to delay having that book? If I were being you I will go to the publication store hurriedly.
