Advances in Visual Data Compression and Communication: Meeting the Requirements of New Applications (Multimedia Computing, Communication and Intelligence) Feng Wu

Visual information is one of the richest and most bandwidth-consuming modes of communication. To meet the requirements of emerging applications, powerful data compression and transmission techniques are required to achieve highly efficient communication, even in the presence of growing communication channels that offer increased bandwidth.

Presenting the results of the author's years of research on visual data compression and transmission, **Advances in Visual Data Compression and Communication: Meeting the Requirements of New Applications** provides a theoretical and technical basis for advanced research on visual data compression and communication.

The book studies the drifting problem in scalable video coding, analyzes the reasons causing the problem, and proposes various solutions to the problem. It explores the author's Barbell-based lifting coding scheme that has been adopted as common software by MPEG. It also proposes a unified framework for deriving a directional transform from the nondirectional counterpart. The structure of the framework and the statistic distribution of coefficients are similar to those of the nondirectional transforms, which facilitates subsequent entropy coding.

Exploring the visual correlation that exists in media, the text extends the current coding framework from different aspects, including advanced image synthesis—from description and reconstruction to organizing correlated images as a pseudo sequence. It explains how to apply compressive sensing to solve the data compression problem during transmission and covers novel research on compressive sensor data gathering, random projection codes, and compressive modulation.

For analog and digital transmission technologies, the book develops the pseudo-analog transmission for media and explores cutting-edge research on distributed pseudo-analog transmission, denoising in pseudo-analog transmission, and supporting MIMO. It concludes by considering emerging developments of information theory for future applications.

From reader reviews:

Martha Wilson:

Have you spare time for just a day? What do you do when you have more or little spare time? Yeah, you can choose the suitable activity with regard to spend your time. Any person spent their very own spare time to take a go walking, shopping, or went to often the Mall. How about open or read a book allowed Advances in Visual Data Compression and Communication: Meeting the Requirements of New Applications (Multimedia Computing, Communication and Intelligence)? Maybe it is to get best activity for you. You understand beside you can spend your time along with your favorite's book, you can wiser than before. Do you agree with their opinion or you have different opinion?

Kenneth Allen:

The experience that you get from Advances in Visual Data Compression and Communication: Meeting the Requirements of New Applications (Multimedia Computing, Communication and Intelligence) will be the more deep you rooting the information that hide inside the words the more you get enthusiastic about reading it. It does not mean that this book is hard to be aware of but Advances in Visual Data Compression and Communication: Meeting the Requirements of New Applications (Multimedia Computing, Communication and Intelligence) giving you joy feeling of reading. The copy writer conveys their point in particular way that can be understood simply by anyone who read this because the author of this e-book is well-known enough. This book also makes your personal vocabulary increase well. That makes it easy to understand then can go together with you, both in printed or e-book style are available. We propose you for having this kind of Advances in Visual Data Compression and Communication: Meeting the Requirements of New Applications (Multimedia Computing, Communication and Intelligence) instantly.

Guadalupe Hauser:

Often the book Advances in Visual Data Compression and Communication: Meeting the Requirements of New Applications (Multimedia Computing, Communication and Intelligence) will bring someone to the new experience of reading a new book. The author style to clarify the idea is very unique. In the event you try to find new book to see, this book very appropriate to you. The book Advances in Visual Data Compression and Communication: Meeting the Requirements of New Applications (Multimedia Computing, Communication and Intelligence) is much recommended to you to learn. You can also get the e-book from the official web site, so you can more easily to read the book.

Roger Richmond:

Playing with family inside a park, coming to see the water world or hanging out with friends is thing that usually you could have done when you have spare time, subsequently why you don't try thing that really opposite from that. 1 activity that make you not sensation tired but still relaxing, trilling like on roller coaster

you have been ride on and with addition associated with. Even you love Advances in Visual Data Compression and Communication: Meeting the Requirements of New Applications (Multimedia Computing, Communication and Intelligence), you may enjoy both. It is excellent combination right, you still wish to miss it? What kind of hangout type is it? Oh occur its mind hangout guys. What? Still don't get it, oh come on its named reading friends.
