## **The Catecholaminergic Innervation of the Rat Amygdala (Advances in Anatomy, Embryology and Cell Biology) Esther Asan**

A detailed description of ultrastructural and neurochemical characteristics of dopaminergic, noradrenergic and adrenergic afferent fibers and of their target structures in the central, basal and intercalated nuclei of the rat amygdala. The results serve as a basis for the interpretation of the effects of catecholamines upon amygdaloid functions in emotion, attention, learning and memory.
