Atlas of Hematologic Neoplasms Tsieh Sun

Due to its rapid development in recent years, hematopathology has become a very complicated discipline. The current development is mainly in two aspects: the new classification of lymphomas and leukemias and the new techniques.

The Revised European-American Classification of Lymphoid Neoplasms (REAL classification) and the World Health Organization (WHO) classification of hematologic neoplasms require not only morphologic criteria but also immunophenotyping and molecular genetics for the diagnosis of hematologic tumors. Immunophenotyping is performed by either flow cytometry or immunohistochemistry. There are many new monoclonal antibodies and new equipments accumulated in recent years that make immunophenotyping more or more accurate and helpful. There are even more new techniques invented in recent years in the field of molecular genetics. In cytogenetics, the conventional karyotype is supplemented and partly replaced by the fluorescence in situ hybridization (FISH) technique. The current development of gene expression profiling is even more powerful in terms of subtyping the hematologic tumors, which may help guiding the treatment and predict the prognosis. In molecular biology, the tedious Southern blotting technique is largely replaced by polymerase chain reaction (PCR). The recent development in reverse-transcriptase PCR and quantitative PCR makes these techniques even more versatile.

Because of these new developments, hematopathology has become too complicated to handle by a general pathologist. Many hospitals have to hire a newly trained hematopathologist to oversee peripheral blood, bone marrow and lymph node examinations. These young hematopathologists are geared to the new techniques, but most of them are inexperienced in morphology. No matter how well-trained a hematopathologist is, he or she still needs to see enough cases so that they can recognize the morphology and use the new techniques to substantiate the diagnosis. In other words, morphology is still the basis for the diagnosis of lymphomas and leukemias.

Therefore, a good color atlas is the most helpful tool for these young hematopathologists and for the surgical pathologists who may encounter a few cases of hematologic tumors from time to time. In a busy daily practice, it is difficult to refer to a comprehensive hematologic textbook all the time. There are a few hematologic color atlases on the market to show the morphology of the normal blood cells and hematologic tumor cells. These books are helpful but not enough, because tumor cell morphology is variable from case to case and different kinds of tumor cells may look alike and need to be differentiated by other parameters. The best way to learn morphology is through the format of clinical case study. This format is also consistent with the daily practice of hematopathologists and with the pattern in all the specialty board examinations. Therefore, it is a good learning tool for the pathology residents, hematology fellows as well as medical students.

This proposed book will present 83 clinical cases with clinical history, morphology of the original specimen and a list of differential diagnoses. This is followed by further testing with pictures to show the test results. At the end, a correct diagnosis is rendered with subsequent brief discussion on how the diagnosis is achieved. A few useful references will be cited and a table will be provided for differential diagnosis in some cases. The major emphasis is the provision of 500 color photos of peripheral blood smears, bone marrow aspirates, core biopsy, lymph node biopsy and biopsies of other solid organs that are involved with lymphomas and leukemias. Pictures of other diagnostic parameters, such as flow cytometric histograms, immunohistochemical stains, cytogenetic karyotypes, fluorescence in situ hybridiza

From reader reviews:

Jerry Gavin:

This Atlas of Hematologic Neoplasms book is not really ordinary book, you have it then the world is in your hands. The benefit you have by reading this book is actually information inside this publication incredible fresh, you will get details which is getting deeper an individual read a lot of information you will get. This specific Atlas of Hematologic Neoplasms without we recognize teach the one who reading through it become critical in contemplating and analyzing. Don't always be worry Atlas of Hematologic Neoplasms can bring once you are and not make your case space or bookshelves' turn into full because you can have it within your lovely laptop even cellphone. This Atlas of Hematologic Neoplasms having good arrangement in word and also layout, so you will not truly feel uninterested in reading.

Sarah Stiles:

Exactly why? Because this Atlas of Hematologic Neoplasms is an unordinary book that the inside of the reserve waiting for you to snap that but latter it will surprise you with the secret the item inside. Reading this book beside it was fantastic author who all write the book in such incredible way makes the content interior easier to understand, entertaining way but still convey the meaning totally. So , it is good for you for not hesitating having this any more or you going to regret it. This unique book will give you a lot of rewards than the other book have such as help improving your talent and your critical thinking way. So , still want to postpone having that book? If I were you I will go to the guide store hurriedly.

Shawn Jones:

This Atlas of Hematologic Neoplasms is brand-new way for you who has intense curiosity to look for some information since it relief your hunger associated with. Getting deeper you on it getting knowledge more you know or perhaps you who still having little bit of digest in reading this Atlas of Hematologic Neoplasms can be the light food in your case because the information inside this particular book is easy to get by means of anyone. These books develop itself in the form which is reachable by anyone, yep I mean in the e-book form. People who think that in guide form make them feel drowsy even dizzy this reserve is the answer. So there is absolutely no in reading a publication especially this one. You can find what you are looking for. It should be here for anyone. So , don't miss this! Just read this e-book variety for your better life as well as knowledge.

Julie Berkey:

Don't be worry for anyone who is afraid that this book will certainly filled the space in your house, you can have it in e-book approach, more simple and reachable. This particular Atlas of Hematologic Neoplasms can give you a lot of buddies because by you considering this one book you have matter that they don't and make you more like an interesting person. This specific book can be one of a step for you to get success. This book offer you information that possibly your friend doesn't recognize, by knowing more than other make you to be great people. So , why hesitate? Let me have Atlas of Hematologic Neoplasms.
