## **Biosequestration and Ecological Diversity: Mitigating and Adapting to Climate Change and Environmental Degradation (Social Environmental Sustainability)** Wayne A. White

Increased throughput of carbon-based fossil energy, the destruction of Earth's forests, and other land use changes have resulted in ever higher levels of waste in the form of greenhouse gases—as well as a diminished capacity of the planet to absorb and store those wastes. This means that to avoid catastrophic global warming and maintain the habitability of Earth by protecting essential soil and water resources, we will need to not only reduce emissions, but also increase carbon storage in the land system.

**Biosequestration and Ecological Diversity: Mitigating and Adapting to Climate Change and Environmental Degradation** discusses ways to remove greenhouse gases from the atmosphere and build soil by changing the way people use and manage land.

### ***Principles and Practices for Better Land Management***

Examining biosequestration in social, economic, and political context, the book reviews recent scientific evidence on climate change and global ecological degradation and explains how the carbon cycle has been transformed by destructive land use practices, such as deforestation and the burning of fossil fuels. It describes the principles of biosequestration and restorative land management practices and discusses the potential of carbon storage. The author offers specific examples of inexpensive, proven practices that build soil, protect scarce water resources, and enhance ecological diversity. He also identifies conservation policies that provide technical assistance and financial resources for ecological protection and restoration.

### ***How You Can Help Mitigate Climate Change with a Little Piece of Land***

Restorative land use and land management practices are critical components of any comprehensive strategy for mitigating and adapting to climate change and global environmental degradation. This book explains how anyone who owns or manages land—from an apartment to a city lot to a farm, forest, park, or even a golf course—can help protect and enhance the biological sequestration of carbon.

**From reader reviews:**

**Noah Cale:**

Nowadays reading books be than want or need but also turn into a life style. This reading habit give you lot of advantages. The advantages you got of course the knowledge the particular information inside the book that will improve your knowledge and information. The info you get based on what kind of guide you read, if you want drive more knowledge just go with training books but if you want sense happy read one having theme for entertaining including comic or novel. The Biosequestration and Ecological Diversity: Mitigating and Adapting to Climate Change and Environmental Degradation (Social Environmental Sustainability) is kind of publication which is giving the reader unpredictable experience.

**Lewis Skinner:**

Information is provisions for people to get better life, information presently can get by anyone from everywhere. The information can be a know-how or any news even a huge concern. What people must be consider if those information which is within the former life are challenging be find than now could be taking seriously which one is appropriate to believe or which one the actual resource are convinced. If you find the unstable resource then you obtain it as your main information we will see huge disadvantage for you. All those possibilities will not happen throughout you if you take Biosequestration and Ecological Diversity: Mitigating and Adapting to Climate Change and Environmental Degradation (Social Environmental Sustainability) as the daily resource information.

**Harry Thomas:**

You will get this Biosequestration and Ecological Diversity: Mitigating and Adapting to Climate Change and Environmental Degradation (Social Environmental Sustainability) by look at the bookstore or Mall. Just viewing or reviewing it can to be your solve trouble if you get difficulties for your knowledge. Kinds of this reserve are various. Not only simply by written or printed but in addition can you enjoy this book simply by e-book. In the modern era just like now, you just looking from your mobile phone and searching what their problem. Right now, choose your own personal ways to get more information about your book. It is most important to arrange you to ultimately make your knowledge are still change. Let's try to choose suitable ways for you.

**Russell Pittman:**

What is your hobby? Have you heard that will question when you got learners? We believe that that concern was given by teacher with their students. Many kinds of hobby, Every person has different hobby. So you know that little person like reading or as studying become their hobby. You should know that reading is very important as well as book as to be the matter. Book is important thing to include you knowledge, except your own teacher or lecturer. You find good news or update regarding something by book. Different categories of

books that can you take to be your object. One of them is Biosequestration and Ecological Diversity: Mitigating and Adapting to Climate Change and Environmental Degradation (Social Environmental Sustainability).
