## Biotechnology of Blood (Biotechnology Series, 19)

Biotechnology of Blood presents research on applications of biotechnology to blood and its components. The book is organized into four parts. Part I begins with an overview of the blood business in order to provide background of the industry, to identify problems, and perhaps some solutions that rely on the scientific advances made possible by biotechnology. This is followed by studies on the storage and preservation of red blood cells; autologous blood salvage procedures; the development procedures to provide a constant supply of blood group O; and the development of blood substitutes. Part II on plasma fractions includes studies on the preparation of plasma fractions, recombinant antihemophilic factors, and fibrinogen. Part III on the regulation of blood cell products includes studies such as hematopoietic stem cell processing and storage; and long-term bone marrow cell cultures. Part IV on blood-borne diseases examines the inactivation of viruses found with plasma proteins and viruses found with cellular components.
