In Detail

vRealize Automation 6.2 orchestrates the provisioning of infrastructure, applications, and customized services delivered from a self-service web portal. Administrators provide end users resources to consume, such as Operating Systems, and Applications, through a customized web portal and catalog. From the end user perspective, its like shopping for IT resources through an online merchant portal. Administrators get to offload the repetitive portions of their job, such as building VMs, by creating Blueprints that deploy VMs on demand. This ensures uniformity in the VMs and timeliness in their delivery, while providing agility for the IT team to handle other responsibilities outside of provisioning infrastructure and applications.

The book opens with an overview of the history and features of vRealize Automation and moves into the basic components required to set up vRA, as well as some of the best practices. You are guided through the steps to design your vRealize Automation environment and introduced to integration point, including SCCM and Kickstart deployments, as well as Linked Clones. You will learn about Approval Policies and why they are useful for your infrastructure, and how to efficiently set them up. You will learn how to integrate other products, such as vRealize Operations Manager and Orchestrator. Throughout the book, you are provided insights into some of the common errors and pitfalls that occur during installation and maintenance, as well as how to resolve them.

Finally, the book provides a valuable list of references to enhance your knowledge of vRealize Automation 6.2.
